## About The Book

What can I say about a fine perfume. Of course the art of creating a fine fragrance in this industry is a very carefully guarded craft. In order to learn how to assemble a formula takes a very good memory, talent and years of hard work. In fact the three leaders in the industry including Givaudan, IFF and Symrise have their own schools where a student apprentices under a master perfumer.

A fine fragrance is nothing more than an assemblage of pleasing materials that together works harmoniously in a blend. I decided to add my arrangements in order to display the art as simple as it is complex. If one works a composition as a percentage of various materials a fine fragrance formula can be deciphered.

Unfortunately one will very rarely find any compositions on the world wide web. Part of this is due to the paranoia within the industry. A material understanding will allow you to decipher the complexity of just about any fragrance excluding Estee Lauder's Beautiful. Creating a formula with fifteen or more pages just over complicates the art, and of course the fragrance. I decided to add my personal classification of aroma chemicals through the book to help explain the simplicity of a creation and each fragrance family's uniqueness. Any given material can play an important role, or a subordinate one. Again, that is the nature of the creative art.

Personally I believe a fine fragrance can be assembled utilizing a page and a half of various materials. What works together in a blend depends on skill and in part luck by the artist. Most fragrance houses in the states utilize test panels. Trying to get a scent created with endless critics further degrades the fine art. Asking someone a pointed question the answer can be what you want to hear, but not necessarily the truth.

Fragrance launches today are to many often tied to stars and gimmicks. Chandler Burr in his recent book showing the industry states the business needs to get back to its roots. I think he is one hundred percent correct in his assessment. The miss truths put out by the marketing, public relations and ad advertising folks add to the declining sales and many failures.

Whether any particular fragrance in my book works is unknown. However, I do know one will not find a finer collection of fragrance compositions anywhere on the internet. The craft and its art are that highly prized. If one finds a book the formulas are either old, useless or misleading further obfuscating the art.

Enjoy presentation into the creative art.

## Fragrance Families

CLASSIFICATION IS VARIED, and there are new sub-divisions constantly being added. Keep in mind the sub-groups are part of the below families. Tastes and popularity of any particular group can vary from country to country. With the launch of more, and more fine fragrances the market is getting increasingly over saturated. Employed today one will find a lot of marketing hype. This includes of course the use of movie stars, personalities, custom bottles, and fancy packaging.

Fine fragrances can be categorized in several different aroma groupings. All scents no matter how unique and distinct fall into fragrance families that include Floral, Chypre, Oriental, Lavender, Fougere and Citrus. They are further divided between women, and men. Listed below are the original families as outlined by Haarman & Reimer.

### Feminine Notes

#### Floral Family:

The largest family of fine fragrances is by far the florals. Floral notes can find their way into the heart of many fragrances. A floral fragrance can be classified as light, green, floral, and heavy. Scents in this family include violet, carnation, rose, gardenia, lily of the valley, tuberose and narcissus. A light fragrance is often described as springtime flowers like Lily of the Valley, Lilac and Freesia often with citrusy or fruity top notes. Green accords can also be based on Muguet, and other leafy stem like materials sometimes based on herbaceous, earthy notes like Galbanum.

Narcotic floral effects can be achieved by blending different floral materials with rose notes plus adding exotic Ylang-Ylang, Methyl Benzoate, and other diverse floral materials. They are often found in southern climates than in more northerly regions, and are thus considered heavy. These include, first and foremost, Jasmin represented by Benzyl Acetate, Hedione to name a few of the fragrance ingredients that are available to a creative artist.

Other exotic types include Tuberose, Orange Blossom and Narcissus. Floral notes in this family can also be balsamic such as Hyacinth. Various violet compounds are a favorite addition to many compositions. The fragrances included in this group enjoy the greatest acceptance around the world. Many formulas display distinctive accords that are reminiscent of their natural counter parts. It can be made up of a wide variety of floral bouquets, or a certain note which predominates. The floral family has six main sub divisions as Floral,

Green, Fruity, Fresh, Aldehydic and Sweet.

### Floral Floral

A floral fragrance owes its nature to flower blossoms that may differ from one another. Rose materials such as Citronellol, Geraniol, and Phenyl Ethyl Alcohol predominate. Again Jasmine in combination with rose ingredients are the central part of this theme. By adding carnation, ylang-ylang, tuberose, iris and others a purely floral effect can be achieved. Today more synthetic ingredients including the use of artificial bases are utilized due to the high cost and unavailability of essential oils. For example, a fine fragrance such as Chanel # 5 created by Ernst Breaux in 1923 would smell entirely different today.

### Floral Green

A floral green fragrance are natural in nature compounded by blending of herbs, ferns, mosses and citrus fruits. This group is characterized of typical botanical fragrance notes, like those of leaves, stalks or freshly mown grass as well as cucumber-violet-like green notes. Generally relying on parts of plants, and flowers such as Muguet, or Lily of the Valley. They can be delicate as Muguet or have a strong stem like note characteristic of Styrallyl Acetate or Cyclamen Aldehyde. Green is often used to describe lush forests, fallen leaves during the autumn, a woodland meadow, or grassland. They can be further subdivided under Fresh and Balsamic. Galbanum or Olibanum would be in the later family, or the can be a green accord such as Cassis.

### Floral Fruity

A fragrance of a floral fruity type can be achieved by blending fruity elements of a single fruit or a combination of two or more of which one can dominate. Apple accords that include, peach, apricot, pineapple, cassis, prune, strawberry, and raspberry. Mixed with fine floral ingredients that include jasmine, violet, hyacinth and others provide a rich show case of what can be achieved within this family. Becoming more popular each day is the utilization of Papaya, and Passion Fruit. These perfumes are known to have a clean fruit quality and a soft warmth.

### Floral Fresh

A flower that is found in nature can be fresh, yet sweet and green. This is part of the classification of fine fragrances that is open to interpretation. Some suggest that this type of fragrance can be based on hyacinth, lily of the valley and orange blossom with a fresh fruity note of Bergamot and other citrus materials. Jasmine based on Benzyl Acetate or Hedione can also be part of the theme.

### Floral Aldehydic

Floral aldehydic compounds were discovered in the 19th century. Aldehydes have a powerful diffusive effect, and are characterized by a rich opulent top note. In small parts certain aldehydes are used as a top note effect simulating a variety of floral scents that are found in nature. Muguet or Lily of the Valley based on Hydroxycitronellal is a popular example. Utilizing aldehydes provide modern accords with a richness and

depth. The first fine fragrance utilizing a large percentage of synthetic components was Chanel # 5 created by Ernest Beaux for Coco Chanel. Other sub groups can include woody and powdery notes that are a combination of Anisic Aldehyde, and Cedarwood Oil of Virginia.

### Floral Sweet

A floral sweet fragrance is often described as a floriental. Fragrances in this family can include gardenia, jas mine, freesia, and orange flower. A fine sweet fragrance can be based on Benzyl Salicylate, Hexyl Cinnamic Aldehyde, Vetiver including exotic spices and their essences.

### Chypre:

The term Chypre was coined by Francois Coty who created the original perfume in 1917. They were based on aroma materials that had an origin from Mediterranean countries. Mr. Coty was born on the island of Cyprus thus he came up with his namesake Chypre. The concept is based on a citrus fresh accord and moss. Originally the accord was founded on Bergamot Oil although scents in the family can include clary sage, lavender, patchouli and resins. The scents feel perfect for those who enjoy the fresh outdoors. In women's fragrance there are five main subdivisions that include Floral, Fresh, Fruity, Musk and Green.

### Chypre Floral

Keeping this concept true to form the rose is used as a dominate theme. In my book titled, A Reference Book On Fragrances I have a sub division that lists over 200 rose materials. Also used is a Gardenia accord that can be artificially recreated using a Jasmin rose theme with Styrallyl Acetate as a predominate green note.

### Chypre Fresh

The term fresh is open to a wide variety of interpretations. Fresh can be floral directed having its origins in many different flowers, and of course with citrus top note components. With time this term has become increasingly generic in its use.

### Chypre Fruity

This concept is characterized by a predominate fruitiness often having a peach like fragrance. It is more pronounced in this group having components that are inherent to this family.

### Chypre Floral Musk

There are several popular animal notes that are employed in modern perfumery today. Musk was originally obtained from the musk deer native to Asia. In dilution otherwise known as a tincture it has a distinctive animal like note. Civet is a cat native to Ethiopia in Africa. The animal has a gland that produces a sweet urine musk like odor that produces a velvety nuance to many fragrance blends in trace amounts. A third is Ambergris produced by the sperm whale. Often this material gray in color is found washed up on the shores of beaches

around the world after being vomited by the whale. A pound of this material can bring a King's ransom. Today most of the musk like animal materials are produced synthetically. Fine representations of this group include Galaxolide 50, Ethylene Brassylate including Cashmeran, and Nepalva. Materials that include Phenyl produce a musk like honey fragrance.

### Chypre Green

A delightful concept, and one of my favorites is the Green theme. It is always open for experimentation and interpretations. Generally a wide variety of floral components are incorporated into this arrangement with a greenness based on Galbanum, Muguet, or Lily of the Valley, with strong green like synthetic notes. Often added are herbaceous coniferous traces to round off this accord.

### Oriental Family:

The Oriental family of fragrances is often referred to as Amber. These perfumes have a strong, musky, spicy scent that often conjure up memories of Arabia and India. They are rich, heavy and diffusive. The sweetness can be derived from vanilla, sandalwood to name a few. Combining floral ingredients they are mysterious and sensual. The first Oriental was Jicky created by Guerlain in 1889. This group contain aroma materials often are reminiscent of the Far East. There's a wide range of interpretations some flowery related whereas others have a heavy spicy theme.

### Oriental Sweet

An oriental sweet scent can have a citrus top note and a sweet vanilla amber foundation. Vanillin, and Ethyl Vanillin both aldehydes can be used up to 10 % providing that extra sweetness. One can also utilize Balsam Peru Oil, Vanilla Tincture, Vanilla Sur Abs. C'Less MD in conjunction with Benzyl family of materials.

### Oriental Spicy

Incorporating spicy ingredients often from Indian can include clove, nutmeg and carnation, cardamom and curry. Adding musk materials that can include floral accords such as jasmine and ylang-ylang tend to provide a delicate touch to this group. The notes can be bitter, or contain sweet elements A fragrance in this area is distinctive, and can be enjoyed by both men and women. Many perfumers add balsamic notes derived from balsam materials including resinous notes derived from Balsam Peru.

**M**EN'S FRAGRANCES TODAY ARE OPEN TO A MYRIAD of interpretations based on Lavender, Fougere, Oriental, Chypre and Citrus. The Oriental, and Chypre group shares a common theme with women's fragrances. Lavender Family:

### Masculine Notes

The fragrances are comprised of a union of lavender, or lavandin notes atop a mossy base with a citrusy freshness. Fougere Royale by Houbigant was the first scent in this class. The Lavender and Fougere families

are similar often incorporating aroma materials that can be found in either theme. Originally it was intended for women, but soon found its way to the men's side. Having fresh lavender as the main part of the fragrance there is less room for creative interpretation. Both fresh and spicy themes predominate.

### Lavender Fresh

This group is categorized by a predominate Lavender accord. Supporting notes can come from many areas opening up this theme to a wide range of creative interpretations.

### Lavender Spicy

Again Lavender is the dominate theme. However added to it is a pine like spiciness with a herbaceous tone centered on the fresh flower. It is generally found its way in many masculine applications possessing a wide range of different themes.

### Fougere Family:

The French word for Fern is Fougere. Ferns found in nature have very little odor. Generally the concept is based on herbaceous materials that include Coumarin, Oak Moss, Lavender and Geranium. They are aromatic often with a camphoraceous, minty, eucalyptus like with an earthy nuance. They are usually found on low-growing, unobtrusively blossoming plants. Other examples include rosemary, sage as well as peppermint and lavender. It also can be quite representative of a woodland accord.

Fougere Royale first introduced by Houbigant in 1882 was the start of this family. A composition can utilize a wide range of aromatic chemicals as mentioned above including a variety of herbs, geranium and ferns. The group was originally intended for the feminine market. However, it soon found its way to the men's side of the fragrance isle. There are four sub-divisions in this group headed by Floral, Fresh, Woody and Sweet themes.

### Fougere Fresh

This group has a predominate lavender freshness. Many of today's fragrances have utilized a dry-fresh approach that can often incorporate a variety of different accords.

### Fougere Floral

The fougere floral theme can incorporate a variety of different components. This can include combinations of dry fresh lavender often utilizing muguet, cyclamen and spicy woody notes.

### Fougere Woody

This is a predominate woody theme. However, to keep the fragrance a fougere woody materials have to be used that are part of this group. Sub divisions within this family can include ones with a leather, tobacco and animal materials.

## Fougere Sweet

This division has a predominate lavender interpretation usually built on the tonka bean otherwise known today as coumarin. Depending on who smells the fragrance it can be sweet, fresh and yet woody depending on the percentages of fragrance ingredients utilized.

## Oriental Family:

The oriental family of fine fragrances is shared with the women. Scents in this family include amber, vanilla, woods, and resins. Spice materials such as cardamom, nutmeg, caraway, cassia, carnation, cinnamon find their way in a variety of interesting combinations with a masculine theme. Floral notes such as rose and jasmine including the violet are part of the accord. Bay Oil from the West Indies including Pepper, Basil and Olibanum are popular base materials. The mystery of the orient gives forth to an interesting, and at the same time delightful group of fragrances.

## Oriental Spicy

Scents in this family can include combinations of spicy notes along with amber, vanilla, woods and resinous materials. Fine fragrances in this group can be on the heavy side, and long lasting.

## Oriental Sweet

An oriental sweet fragrance can share many similarities with its spicy counter part. In this family of fragrances there is a sweetness that can be based on vanilla, jasmine, or synthetic aldehydes to provide strength. Of course cloves, ginger, carnation, nutmeg, including caraway, and nutmeg are characteristic of this theme.

## Chypre Family:

A Chypre fragrance was originally created by Francois Coty, and is based on ingredients originally from the Mediterranean countries. It emphasizes the contrast between the citrus freshness of bergamot type top notes and a mossy patchouli base. Chypre perfumes tend to be strong, and aromatic. In the men's side of the family there are five main groups that have a woody, leathery, coniferous, fresh and green themes. There is a wide range of accords that can be achieved by combining masculine aroma notes in daring ways. It is reminiscent of those who love to explore, and enjoy the fresh outdoors.

## Chypre Woody

This is a group that is highly reminiscent of chipped wood. One of the exceptions is that of cedar which smells like a cedar chest odor with a slightly camphoraceous off-note. Sandalwood tends to smell sultry, and warm at times described as somewhat animalic. Vetiver from Haiti has a pronounced grassy earthy wood like note that varies depending on its purity. Patchouli can smell earthy, herbaceous sweet yet possess a slightly fruity tone. Other wood like materials include rosewood and pine oils. Each theme has a distinct pattern, and can incorporate materials that are utilized in other groups.

## Chypre Leather

Fragrance notes derived from genuine leather are dominate in this accord. Typical components can include Birch Tar Oil that is distilled from Birch Trees. Cade Oil can often be used to simulate the odor including Costus Oil. Other materials include Cedryl Acetate, 2, 6 Xylenol, Suderal LT & HT plus the Quinolines. Of course fine leather bases such as Leather LWS - 3768, and Hydrocarbon SB are often used to great effect. Great care has to be taken to tame the materials. Keep in mind some have restrictive uses in the European Union that includes Birch Tar Oil. I clearly remember on one occasion sampling this odor finding it lasted on a smelling strip well over a month.

## Chypre Coniferous

A coniferous fine fragrance is reminiscent of crushed conifer needles, or resins that often display citrusy, herbaceous, or aromatic spice like elements. They can also possess an earthy note. This group is predominately resinous and green. Pine needle oil like Iso Bornyl Acetate, Fir Needle Canadian is preferred. Citrus top notes are often utilized to create sweet like fresh notes.

## Chypre Fresh

A chypre fresh concept can include notes of sage, lavender, oakmoss, patchouli and resins. The scents have a woody outdoor feel reminiscent of the forest.

## Chypre Green

The chypre green accord incorporates the same group of aromatic chemicals. However, in this case often Galbanum Oil and other green related floral materials are added to provide a fresh green effect.

## Citrus Family

This is predominately a man's group of fragrances. Often citrus notes are combined in fine floral fruity accords to strengthen the top note of this group of fragrances. They are predominately light and fresh with an overwhelming citrus note such as bergamot, orange, lemon, lime, petitgrain, grapefruit, tangerine, and mandarin. Citrus fragrances are refreshing very popular in the summer.

## Citrus Floral

A citrus floral arrangement is predominately floral based with a distinctive citrus note based on the above.

## Citrus Fantasy

A citrus fantasy concept can also have a floral theme different base materials including the combination of many different citrus notes to produce different effects.

### Citrus Fresh

A citrus fresh fragrance is open for interpretation. What's fresh to one interesting can be green to another. A fresh fruit can be tart, sweet, juicy strong or weak.

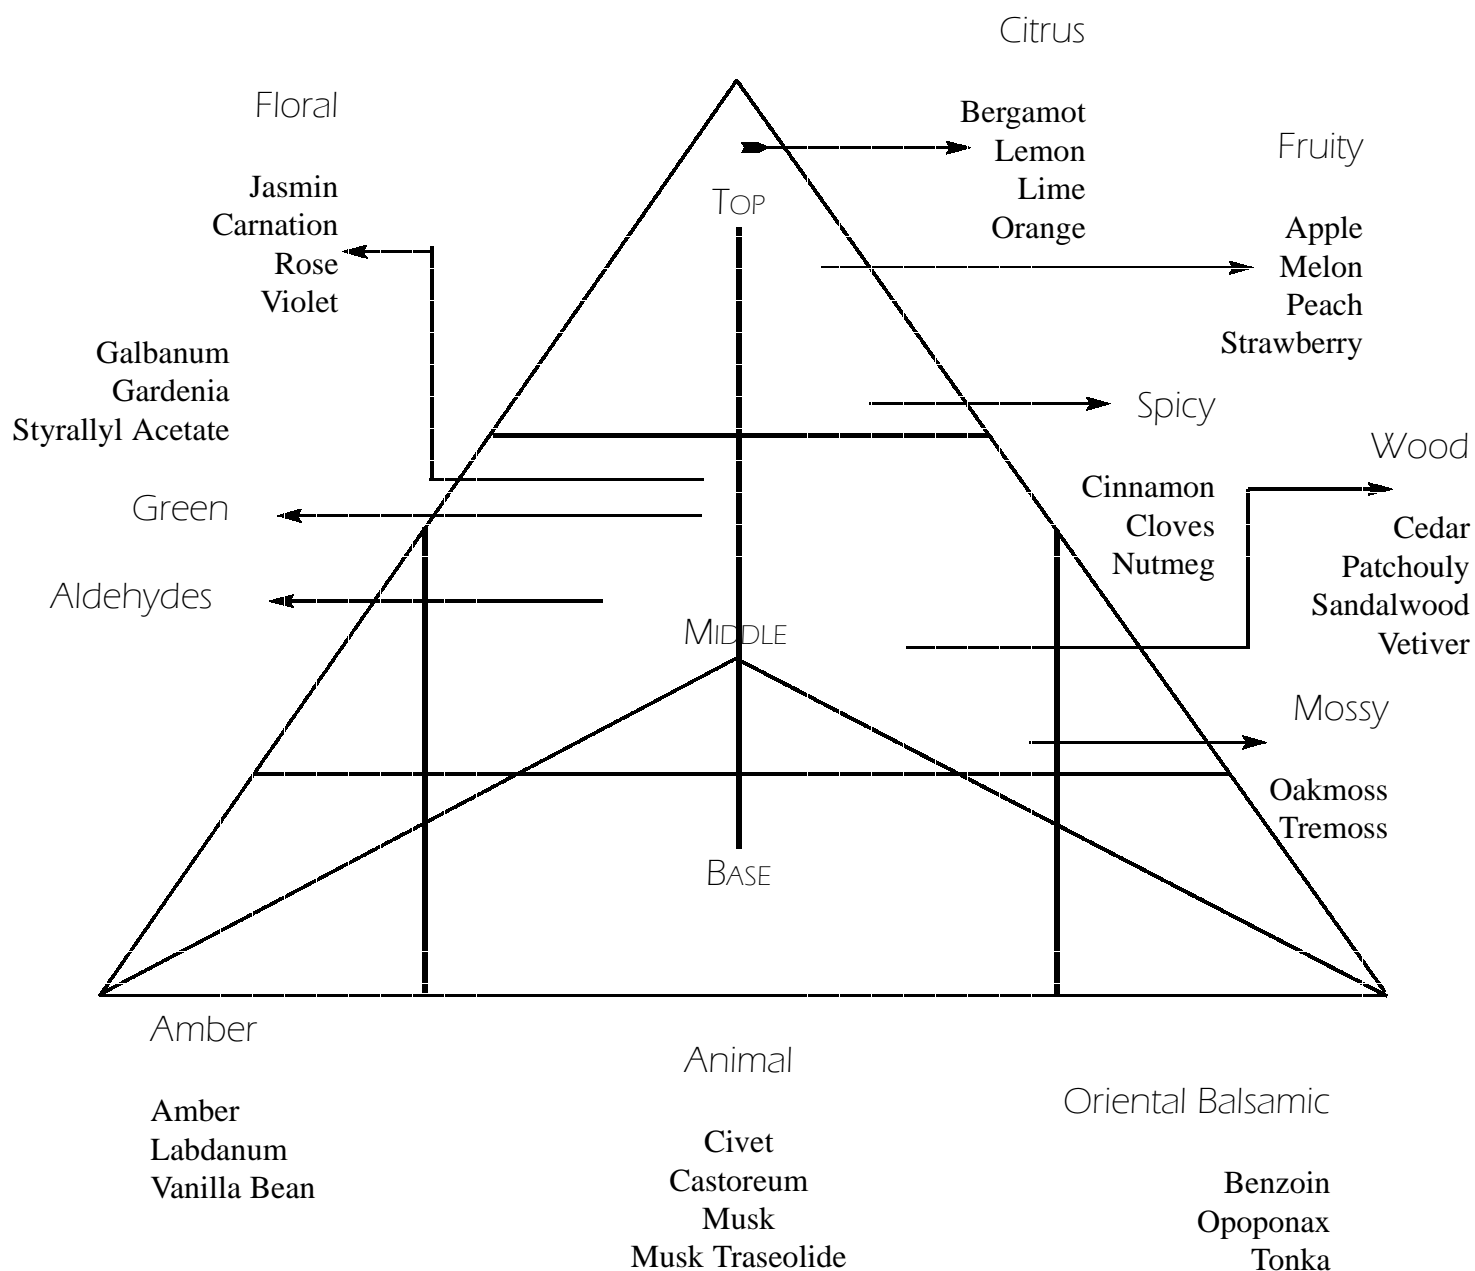

### Citrus Green

A citrus green fragrance has elements of all of the above. The greenness can be derived from Galbanum Oils, Olibanum that can possess a natural green note to many floral materials including powerful top note green note aromas.

### Ozone Family:

Oceanic, ozone, watery are an example of a new group of fragrances. Often they are described as things you can't bottle naturally like ocean spray, mountain air, or freshly laundered clothes. There is a wide range of fragrant ingredient materials available as outlined below:

## Fine Woman's Fragrance - L'Air du Flor

The Scent Pyramid

The florals represent the soul of every feminine perfume. They are basically middle notes. Nevertheless, as you can see, they also play an important role in the development of the top and the base of the fragrance.

The citrus, first of the top notes, also play a fairly important role in the development of the middle of a fragrance. Then come the green notes, the fruity notes, and lastly the aldehydes, pure aroma chemicals with no bases in nature, which are used to give diffusion and originality to a fragrance.

From there, we move on to the base notes, which include the spices (which may also play an important role in the development of the top of the fragrance), the mosses, the woods, the oriental/balsamic, the animal and the amber notes.

A triangle such as the outside one will give you a fragrance such as L'Air du Temps. The narrow inside triangle with its emphasis on the top notes shows a fresh fragrance such as Diorella. The wide triangle with its emphasis on the base notes illustrates a fragrance such as Shalimar.

While this is a very much a generalization, by varying the form of the triangle one can obtain an idea of the performance of a fragrance and of the corresponding raw materials which go into its development.

The above should not be interpreted as an attempt to reduce a perfume to a mere triangle: the grandeur of a fragrance comes from its richness, not from its austerity. Nevertheless, the triangle approach seems the most apt for visually translating notions which we all know are particularly difficult to grasp and express.

## Feminine Fragrance's - Floral Floral

### FLORAL FLORAL

A floral fragrance owes its nature to flower blossoms that may differ from one another. Rose materials such as Citronellol, Geraniol, and Phenyl Ethyl Alcohol predominate. Again Jasmine in combination with rose ingredients are the central part of this theme. By adding carnation, ylang-ylang, tuberose, iris and others a purely floral effect can be achieved. Today more synthetic ingredients including the use of artificial bases are utilized due to the high cost and unavailability of essential oils. For example, a fine fragrance such as Chanel # 5 created by Ernst Breaux in 1923 would smell entirely different today.

## Feminine Fragrance's - Floral Bouquet

### FLORAL BOUQUET

The Floral Bouquet family is feminine, and is new and one of my favorites. Some perfumers refer to it as a Frangipani. In my mind it can be based on jasmine, rose, muguet, gardenia, carnation or for that matter any floral material. The direction of this group can be based on any theme including fresh floral top notes and fruity arrangements.

## Feminine Fragrance's - Floral Green

### FLORAL GREEN

A floral green fragrance are natural in nature compounded by blending of herbs, ferns, mosses and citrus fruits. This group is characterized of typical botanical fragrance notes, like those of leaves, stalks or freshly mown grass as well as cucumber-violet-like green notes. Generally relying on parts of plants, and flowers such as Muguet, or Lily of the Valley. They can be delicate as Muguet or have a strong stem like note characteristic of Styrallyl Acetate or Cyclamen Aldehyde. Green is often used to describe lush forests, fallen leaves during the autumn, a woodland meadow, or grassland. They can be further subdivided under Fresh and Balsamic. Galbanum or Olibanum would be in the later family, or the can be a green accord such as Cassis.

## Feminine Fragrance's - Floral Fruity

### FLORAL FRUITY

A fragrance of a floral fruity type can be achieved by blending fruity elements of a single fruit or a combination of two or more of which one can dominate. Apple accords that include, peach, apricot, pineapple, cassis, prune, strawberry, and raspberry. Mixed with fine floral ingredients that include jasmine, violet, hyacinth and others provide a rich show case of what can be achieved within this family. Becoming more popular each day is the utilization of Papaya, and Passion Fruit. These perfumes are known to have a clean fruit quality and a soft warmth.

## Feminine Fragrance's - Floral Fresh

### FLORAL FRESH

A flower that is found in nature can be fresh, yet sweet and green. This is part of the classification of fine fragrances that is open to interpretation. Some suggest that this type of fragrance can be based on hyacinth, lily of the valley and orange blossom with a fresh fruity note of Bergamot and other citrus materials. Jasmine based on Benzyl Acetate or Hedione can also be part of the theme.

## Feminine Fragrance's - Floral Aldehydic

### FLORAL ALDEHYDIC

Floral aldehydic compounds were discovered in the 19th century. Aldehydes have a powerful diffusive effect, and are characterized by a rich opulent top note. In small parts certain aldehydes are used as a top note effect simulating a variety of floral scents that are found in nature. Muguet or Lily of the Valley based on Hydroxycitronellal is a popular example. Utilizing aldehydes provide modern accords with a richness and depth. The first fine fragrance utilizing a large percentage of synthetic components was Chanel # 5 created by Ernest Beaux for Coco Chanel. Other sub groups can include woody and powdery notes that are a combination of Anisic Aldehyde, and Cedarwood Oil of Virginia.

## Feminine Fragrance's - Chypre Floral

### CHYPRE FLORAL

Keeping this concept true to form the rose is used as a dominate theme. In my book titled, A Reference Book On Fragrances I have a sub division that lists over 200 rose materials. Also used is a Gardenia accord that can be artificially recreated using a Jasmin rose theme with Styrallyl Acetate as a predominate green note.

## Feminine Fragrance's - Chypre Fresh

### CHYPRE FRESH

The term fresh is open to a wide variety of interpretations. Fresh can be floral directed having its origins in many different flowers, and of course with citrus top note components. With time this term has become increasingly generic in its use.

## Musk, Animalic Fragrance Chemicals

Abalide	Sweet musk similar to tonalid.
Ambargris	A healing panacea made from large chunks of ambergris only when they are found by fisherman floating on the Atlantic Ocean. A scent so beautiful and popular in Morocco that it inspired John Singer Sargent to paint his famous La Furnee d'Ambergris.
Ambergris T Oliffac	A substitute for the traditional 3 % tincture of ambergris.
Ambrain	Labdanum musk.
Ambrette Ess. Beurre Lave	A delicate sweet musk fragrance.
Ambrette C	Sweet musk.
Ambrette XNM	Sweet, but heavy floral musky odor.
Ambrettex	Musk.
Ambrettolide	Floral musky sweet odor.
Ambrinol	Extremely powerful amber with natural somewhat musky.
A C A Di Methyl Acetal	Peculiar animal green odor.
Amyl Phenyl Acetate	Sweet musk animal odor.
Angelic Root Oil	Pleasantly aromatic a mixture of musk.
Animalic 9143	Animal.
Animalone	Musk.
Benzyl Phenyl Acetate	Mild sweet honey floral.
Castaulon	Warm, intense fatty hairy animal odor.
Castorium Hyper Abs.	Very powerful warm animal like scent.
Cashmeran	Diffusive musk.
Celestolid	Mild, and sweet musky odor.
Civet Abs. 394 BF	An extremely powerful obnoxious animal like fecal odor.
Civet AAB394	Fine substitute of the original absolute.
Civet AB422A	Excellent reconstitution long lasting.
Civet Abs. 394 BF	An extremely powerful obnoxious animal like fecal odor.
Civet Artificial I.A.	Lacks the characteristic softness which is found with powder.
Civet Artificial XBS	Obnoxiously strong fecal odor.
Civet Augaflor 6	Strong, long lasting civet-like specialty, unmistakably animal with a woody background. A good economical reproduction of the

	original and possesses good fixative properties. May be used to advantage in toiletries where the price of the natural material precludes use.
Civet Base # 1	A very sweet slightly cloying fecal odor of the abyssinian cat.
Civet Concentrate 50	Strong acidic animal, fecal tone invaluable in fine fragrances.
Civet Concrete	Musky odor extremely diffusive and tenacious.
Civet Ethiopia	A glandular secretion collected from primarily male cats. In small traces adds a velvety touch to many different fine bouquets.
Civet # 3 S - 788	A strong animal odor of the civet cat close to the natural oil.
Civet 170 BSA	Typical animal sweet musky odor reminiscent of the civet cat.
Civet Powder	Unquestionably animal fecal odor of the civet cat.
Civet Resin Abs.	Diffusive animal fecal like odor of the civet cat.
Civet Tincture	An odor reminiscent of the civet cat, fecal like.
Civet 241 Oliffac	Strong animal, fecal notes similar to natural civet, sensual.
Civettal	A liquid form which lacks the softness found with natural powder.
Civette Abs.	Animal sweet, free from fecal and urine notes.
Civette Artificial Abs.	Animal sweet.
Civette Givco 169	This Givco is a close reconstitution of civet absolute, which it can replace in equal amounts. It does not contain any animal extract. It adds diffusive warmth to fragrances and provides the distinctive effect produced by natural civet in floral-jasmin, amber, oriental, chypre, and tobacco accords.

## Feminine Fragrance's - Chypre Floral Animalic

### CHYPRE FLORAL ANIMALIC

There are several popular animal notes that are employed in modern perfumery today. Musk was originally obtained from the musk deer native to Asia. In dilution otherwise known as a tincture it has a distinctive animal like note. Civet is a cat native to Ethiopia in Africa. The animal has a gland that produces a sweet urine musk like odor that produces a velvety nuance to many fragrance blends in trace amounts. A third is Ambergris produced by the sperm whale. Often this material gray in color is found washed up on the shores of beaches around the world after being vomited by the whale. A pound of this material can bring a King's ransom. Today most of the musk like animal materials are produced synthetically. Fine representations of this group include Galaxolide 50, Ethylene Brassylate including Cashmeran, and Nepalva. Materials that include Phenyl produce a musk like honey fragrance.

## Feminine Fragrance's - Chypre Green

### CHYPRE GREEN

A delightful concept, and one of my favorites is the Green theme. It is always open for experimentation and interpretations. Generally a wide variety of floral components are incorporated into this arrangement with a greenness based on Galbanum, Muguet, or Lily of the Valley, with strong green like synthetic notes. Often added are herbaceous coniferous traces to round off this accord.

## Feminine Fragrance's - Floriental

### FLORIENTAL

A Floriental is a new family of fine fragrances. The heart of the composition is based on a floral arrangement with a slight emphasis on oriental notes. Whether this fragrance should be classified in the floral family of fragrances or the oriental is open for debate. I decided to place it before the oriental family since the spice notes will predominate most arrangements.

## Feminine Fragrance's - Oriental Sweet

### ORIENTAL SWEET

An oriental sweet scent can have a citrus top note and a sweet vanilla amber foundation. Vanillin, and Ethyl Vanillin both aldehydes can be used up to 10 % providing that extra sweetness. One can also utilize Balsam Peru Oil, Vanilla Tincture, Vanilla Sur Abs. C'Less MD in conjunction with Benzyl family of materials.

## Feminine Fragrance's - Oriental Spicy

### ORIENTAL SPICY

Incorporating spicy ingredients often from Indian can include clove, nutmeg and carnation, cardamom and curry. Adding musk materials that can include floral accords such as jasmine and ylang-ylang tend to provide a delicate touch to this group. The notes can be bitter, or contain sweet elements A fragrance in this area is distinctive, and can be enjoyed by both men and women. Many perfumers add balsamic notes derived from balsam materials including resinous notes derived from Balsam Peru.

## Fragrance Families

**M**EN'S FRAGRANCES TODAY ARE OPEN TO A MYRIAD OF INTERPRETATIONS based on Lavender, Fougere, Oriental, Chypre and Citrus. The Oriental, and Chypre group shares a common theme with women's fragrances

### MASCULINE NOTES

#### Lavender Family:

The fragrances are comprised of a union of lavender, or lavandin notes atop a mossy base with a citrusy freshness. Fougere Royale by Houbigant was the first scent in this class. The Lavender and Fougere families are similar often incorporating aroma materials that can be found in either theme. Originally it was intended for women, but soon found its way to the men's side. Having fresh lavender as the main part of the fragrance there is less room for creative interpretation. Both fresh and spicy themes predominate.

#### Lavender Fresh

This group is categorized by a predominate Lavender accord. Supporting notes can come from many areas opening up this theme to a wide range of creative interpretations.

#### Lavender Spicy

Again Lavender is the dominate theme. However added to it is a pine like spiciness with a herbaceous tone centered on the fresh flower. It is generally found its way in many masculine applications possessing a wide range of different themes.

#### Fougere Family:

The French word for Fern is Fougere. Ferns found in nature have very little odor. Generally the concept is based on herbaceous materials that include Coumarin, Oak Moss, Lavender and Geranium. They are aromatic often with a camphoraceous, minty, eucalyptus like with an earthy nuance. They are usually found on low-growing, unobtrusively blossoming plants. Other examples include rosemary, sage as well as peppermint and lavender. It also can be quite representative of a woodland accord.

Fougere Royale first introduced by Houbigant in 1882 was the start of this family. A composition can uti-

lize a wide range of aromatic chemicals as mentioned above including a variety of herbs, geranium and ferns. The group was originally intended for the feminine market. However, it soon found its way to the men's side of the fragrance isle. There are four sub-divisions in this group headed by Floral, Fresh, Woody and Sweet themes.

#### Fougere Fresh

This group has a predominate lavender freshness. Many of today's fragrances have utilized a dry-fresh approach that can often incorporate a variety of different accords.

#### Fougere Floral

The fougere floral theme can incorporate a variety of different components. This can include combinations of dry fresh lavender often utilizing muguet, cyclamen and spicy woody notes.

#### Fougere Woody

This is a predominate woody theme. However, to keep the fragrance a fougere woody materials have to be used that are part of this group. Sub divisions within this family can include ones with a leather, tobacco and animal materials.

#### Fougere Sweet

This division has a predominate lavender interpretation usually built on the tonka bean otherwise known today as coumarin. Depending on who smells the fragrance it can be sweet, fresh and yet woody depending on the percentages of fragrance ingredients utilized.

#### Oriental Family:

The oriental family of fine fragrances is shared with the women. Scents in this family include amber, vanilla, woods, and resins. Spice materials such as cardamom, nutmeg, caraway, cassia, carnation, cinnamon find their way in a variety of interesting combinations with a masculine theme. Floral notes such as rose and jasmine including the violet are part of the accord. Bay Oil from the West Indies including Pepper, Basil and Olibanum are popular base materials. The mystery of the orient gives forth to an interesting, and at the same time delightful group of fragrances.

#### Oriental Sweet

An oriental sweet fragrance can share many similarities with its spicy counter part. In this family of fragrances there is a sweetness that can be based on vanilla, jasmine, or synthetic aldehydes to provide strength. Of course cloves, ginger, carnation, nutmeg, including caraway, and nutmeg are characteristic of this theme.

#### Oriental Spicy

Scents in this family can include combinations of spicy notes along with amber, vanilla, woods and resinous

materials. Fine fragrances in this group can be on the heavy side, and long lasting.

### Chypre Family:

A Chypre fragrance was originally created by Francois Coty, and is based on ingredients originally from the Mediterranean countries. It emphasizes the contrast between the citrus freshness of bergamot type top notes and a mossy patchouli base. Chypre perfumes tend to be strong, and aromatic. In the men's side of the family there are five main groups that have a woody, leathery, coniferous, fresh and green themes. There is a wide range of accords that can be achieved by combining masculine aroma notes in daring ways. It is reminiscent of those who love to explore, and enjoy the fresh outdoors.

### Chypre Woody

This is a group that is highly reminiscent of chipped wood. One of the exceptions is that of cedar which smells like a cedar chest odor with a slightly camphoraceous off-note. Sandalwood tends to smell sultry, and warm at times described as somewhat animalic. Vetiver from Haiti has a pronounced grassy earthy wood like note that varies depending on its purity. Patchouli can smell earthy, herbaceous sweet yet possess a slightly fruity tone. Other wood like materials include rosewood and pine oils. Each theme has a distinct pattern, and can incorporate materials that are utilized in other groups.

### Chypre Leather

Fragrance notes derived from genuine leather are dominate in this accord. Typical components can include Birch Tar Oil that is distilled from Birch Trees. Cade Oil can often be used to simulate the odor including Costus Oil. Other materials include Cedryl Acetate, 2, 6 Xylenol, Suderal LT & HT plus the Quinolines. Of course fine leather bases such as Leather LWS - 3768, and Hydrocarbon SB are often used to great effect. Great care has to be taken to tame the materials. Keep in mind some have restrictive uses in the European Union that includes Birch Tar Oil. I clearly remember on one occasion sampling this odor finding it lasted on a smelling strip well over a month.

### Chypre Coniferous

A coniferous fine fragrance is reminiscent of crushed conifer needles, or resins that often display citrusy, herbaceous, or aromatic spice like elements. They can also possess an earthy note. This group is predominately resinous and green. Pine needle oil like Iso Bornyl Acetate, Fir Needle Canadian is preferred. Citrus top notes are often utilized to create sweet like fresh notes.

### Chypre Fresh

A chypre fresh concept can include notes of sage, lavender, oakmoss, patchouli and resins. The scents have a woody outdoor feel reminiscent of the forest.

## Chypre Green

The chypre green accord incorporates the same group of aromatic chemicals. However, in this case often Galbanum Oil and other green related floral materials are added to provide a fresh green effect.

## Citrus Family:

This is predominately a man's group of fragrances. Often citrus notes are combined in fine floral fruity accords to strengthen the top note of this group of fragrances. They are predominately light and fresh with an overwhelming citrus note such as bergamot, orange, lemon, lime, petitgrain, grapefruit, tangerine, and mandarin. Citrus fragrances are refreshing very popular in the summer.

## Citrus Floral:

A citrus floral arrangement is predominately floral based with a distinctive citrus note based on the above.

## Citrus Fantasy

A citrus fantasy concept can also have a floral theme different base materials including the combination of many different citrus notes to produce different effects.

## Citrus Fresh

A citrus fresh fragrance is open for interpretation. What's fresh to one interesting can be green to another. A fresh fruit can be tart, sweet, juicy strong or weak.

## Citrus Green

A citrus green fragrance has elements of all of the above. The greenness can be derived from Galbanum Oils, Olibanum that can possess a natural green note to many floral materials including powerful top note green note aromas.

## Ozone Family:

Oceanic, ozone, watery are an example of a new group of fragrances. Often they are described as things you can't bottle naturally like ocean spray, mountain air, or freshly laundered clothes. There is a wide range of fragrant ingredient materials available as outlined below:

## Masculine Fragrance's - Oriental Sweet

### ORIENTAL SWEET

An oriental sweet fragrance can share many similarities with its spicy counter part. In this family of fragrances there is a sweetness that can be based on vanilla, jasmine, or synthetic aldehydes to provide strength. Of course cloves, ginger, carnation, nutmeg, including caraway, and nutmeg are characteristic of this theme.

## Masculine Fragrance's - Chypre Woody

### CHYPRE WOODY

This is a group that is highly reminiscent of chipped wood. One of the exceptions is that of cedar which smells like a cedar chest odor with a slightly camphoraceous off-note. Sandalwood tends to smell sultry, and warm at times described as somewhat animalic. Vetiver from Haiti has a pronounced grassy earthy wood like note that varies depending on its purity. Patchouli can smell earthy, herbaceous sweet yet possess a slightly fruity tone. Other wood like materials include rosewood and pine oils. Each theme has a distinct pattern, and can incorporate materials that are utilized in other groups.

## Masculine Fragrance's - Chypre Coniferous

### CHYPRE CONIFEROUS

A coniferous fine fragrance is reminiscent of crushed conifer needles, or resins that often display citrusy, herbaceous, or aromatic spice like elements. They can also possess an earthy note. This group is predominately resinous and green. Pine needle oil like Iso Bornyl Acetate, Fir Needle Canadian is preferred. Citrus top notes are often utilized to create sweet like fresh notes.

Suederal LT

Leather odor reminiscent of finest tanned hides with a lighter note.

2, 6, Xylenol

Sweet rooty odor of leather.

## Masculine Fragrance's - Chypre Leather

### CHYPRE LEATHER

Fragrance notes derived from genuine leather are dominate in this accord. Typical components can include Birch Tar Oil that is distilled from Birch Trees. Cade Oil can often be used to simulate the odor including Costus Oil. Other materials include Cedryl Acetate, 2, 6 Xylenol, Suderal LT & HT plus the Quinolines. Of course fine leather bases such as Leather LWS - 3768, and Hydrocarbon SB are often used to great effect. Great care has to be taken to tame the materials. Keep in mind some have restrictive uses in the European Union that includes Birch Tar Oil. I clearly remember on one occasion sampling this odor finding it lasted on a smelling strip well over a month.

Orange Aldehyde	Powerful, dilution - sweet orange like, fatty odor.
Orange Carbinyl	Fruity orange.
Orange Carbonyls	Natural orange juice odor.
Orange Des Indes 68A817	A nice clean fresh orange odor with a discreet spicy note.

Orange Essence Oil	A natural oil free from terpene and sequesterpenes.
Orange Flavor Zing.	Green, fresh juicy sweet orange for juicy top notes in citrus blends.
Orange Flower Absolute	Has a very intensely floral, heavy and rich, warm, but also delicate and fresh, long lasting odor, closely resembling the odor of fresh bitter orange blossoms. Although this absolute certainly has notes in common with jasmin absolute, it has a much more versatile application as a floral fond when used at a comparatively low concentration. It shows a pleasant, but peculiar and characteristic, sweet herbaceous backnote, not unlike the one found in jasmin.
Orange Flower Bitter	Very intensely floral, heavy and rich, warm, but also delicate and fresh, long lasting odor, closely resembling the odor of fresh bitter orange blossoms.
Orange Flower Concrete	A dark, brownish or orange brown paste or soft mass. Its odor is extremely strong, floral, deep sweet, with a peculiar woody breadcrumb like backnote and great tenacity in floral notes. In high dilution, it is strikingly reminiscent of the odor of fresh orange blossoms.
Orange Flower Ether	Citrus grapefruit note also reminiscent of bergamot orange.
Orange Guinea Oil	Sweet fruity, reminiscent of the orange peel.
Orange Isolate	Has odor of natural peel, juicy with a rich aldehydic tone.
O.J. Carbinyol STD	Very juicy with an orange top note.
O.J. Carbinyol VCV	Orange, source is most likely valencia oranges.
Orange Juice Extract Natural 4/10	Very characteristic of freshly squeezed oranges without the pulp or slight bitter taste that naturally occurs in the fresh fruit. Overall a delightful fragrance suitable for many different creative blends.
Orange Oil Bitter	Bright bitter odor of oranges.
Orange Oil California	Sweet orange peel like odor.
Orange Oil Distilled	Orange peel like slightly less sweet and juicy.
Orange Oil 5 Fold	A very weak orange peel like odor.
Orange Oil Fla. Mid Season	Fruity orange.
Orange Oil Guinea C.P.	Orange, source Guinea, a country located on the west coast of Africa.
Orange Oil Nardenised	A beautiful sweet, deterpenised oil.
Orange Residue	Orange peel type odor, however not sweet like california oranges.
Orange Oil Sweet	Sweet fruity odor of oranges.

Pamplefleur	Citrus, grapefruit, floral vetiver.
Petitgrain Abs.	The best of petitgrain oil free of terpenic harsh by notes.
Petitgrain Bigarade Abs.	A beautiful product where the sulphur notes of petitgrain are muted. Has a green tea, citrus like woody note representing the essential oil to its finest.
Petitgrain Bigarade Oil	Pleasant fresh floral sweet odor.
Petitgrain Citronnier Oil	Distinct and pleasant, a fresh lemony floral woody odor.
Petitgrain Oil Moroc Sur Fleurs	Fresh floral citrus scent and a woody-herbaceous undertone.
Petitgrain Oil Mandarin	A fresh lemony floral woody odor extremely tenacious.
Petitgrain Oil Paraguay	Strong, bitter sweet, woody floral odor. The topnote is somewhat harsh, but it quickly gives way to a heavy and sweet bodynote of typical petitgrain character, bitter floral, with a sweet and slightly woody backnote. The dryout, which comes quickly since the odor of this oil is not very tenacious, is sweet and slightly woody floral. According to the age of the oil, there are wide variations in the topnote of its odor. Most often, the topnote smells like the topnote of crude bois de rose oil, almost nutmeg like and warm spicy.
Petitgrain Oil S A	A fresh lemony floral woody odor.
Petitgrain Oil Terpeneless	Diffusive less bitter sweet floral woody odor.
Psuedo Linalyl Acetate	Citrus, bergamot floral lavender.
Rhodinol Augaflor 18	This crisp, citrusy type compound can implant an element of Lemon in a perfume. Gives the finished fragrance a freshness of smell, and touch much sought after.
